	Watch for blood feathers at injury site. Gets car sick,	Davida well. May need accistomas returning to
Ace	so should not be fed prior to traveling. Overheats easily on a hot day.	Boxes well. May need assistance returning to glove when he bates
	Has a tendency to show aggressive pose and will go	
	to the ground. May have to try several times to get	Boxes well. Not good at recovering from a bate
Ada	her. Approach slowly but steady and ask her to step up while on perch	and needs to be assisted quickly. 2 nd glove highly suggested (can be garden glove)
	Steps up perfectly. Can be aggressive during	
Addison	migration season. Gets carsick	Boxes well.
Addison	Use long stick/perch. Only 1 person should get him. Ask him to step-up up from T-perch or wall perch. DO NOT GRAB JESSES. He will hop on glove now after he settles. Will hop on and off scale easily with "home"/"hup"	BOXES WOII.
	Will fly back and forth. When he comes back to the long rope perch and starts talking to someone who has a relationship, he is ready to step up on the glove.	
Aldo	giove.	
Armadillo	Gets very car sick, don't feed before program. Check anklets before program and wash out if clogged with mute and stuck to legs. Needs a relationship	Has her own crate. Back her in with hand over her back.
Arya	Needs relationship. May puff up as you approach, occasionally aggressive and may be grabby as she steps up. Right hand glove mandatory. Hold her higher when hooking her up – once out of mew, she settles down.	Boxes very well. Very good at programs. Flies back to perch.
Austin	Steps up perfectly. Let her go to the ramp on top of her perch as that is her "step up" place. She is relaxed when injured wing is down. Easy to work with.	On site programming only. Has not boxed.
Bailey	Gets very car sick, don't feed several hours or longer before program. Requires a relationship with handlers. Check anklets before program and wash out if clogged with mute and stuck to legs.	Perfect at boxing. Always be aware of where his head is as he has bitten people above the glove. Use large vulture box (#14)
Barbosa		Boxes well
Bagherra	Not to go offsite due to age. Needs a relationship, but once established he's very good about stepping up. Responds to "hup" cue	Very good at boxing. May bolt out of box. Good at presentations. Not good for long booths. Use judgment to determine if he should be presented to the public
Beatrix	Does not like wagons/golf carts. Might not do well at booth programs.	Boxes well
Bodhi	Needs a bit of a relationship with handler	Boxes well
Bryce	Needs a bit of a relationship with handler Needs a relationship. Must go slow with Bryce. The first couple of time she might hiss at you. Recommend someone she knows being with you a couple of times as she gets to know you and do glove exchanges with short periods of time at first. Be mindful when she bates, she spins due to her injury and hobbles herself pretty quickly.	On site programming only Needs boxing training – will use #14 box

Bird	Quirks	Special Handling/Boxing Instructions
Callie	Used inflight program. May be stubborn to step up.	Boxes well.
	Steps up perfectly. Might run to the back wall the first	
	time or two. Let her turn around and get back to the back perch. Use a slow and steady approach and	
Cassidy	she should step up using "hup" command.	Boxes well
	Very heat sensitive. Needs a relationship. She tends to go to the ground the first time. Leave and come	
	back. She needs help getting back to the glove if	On site programming only. No new handlers. Use judgment to determine if she should be
Cercei	bating.	presented to the public
	Can be very aggressive in mew. Second glove	
	mandatory. If she is holding tennis ball or is on the ground, leave and come back. Use left glove as	Perfect at boxing in #12. Fly back to perch for a tidbit. It is better to fly her and feed her
Chaco	shield during hook up. Get jesses quickly	BEFORE she goes on a program.
	Often above door. Will assume aggressive posture, then step up anyway. May go to your shoe – you can	
Chiquita	pick her up from there.	Boxes well
	May fly perch to perch before stepping up. May bite at glove. Be alert as she tends to bate "forward" into	Boxes well. Be prepared and have good hold of
D	the handler rather than off towards the back of glove.	jesses as you open the box door as she tends to
Darwin	Slow approach works well.	bolt out of the box. If he goes to ground, try leaving and coming
		back twice. If on ground again, employ very
	Needs a relationship. Sometimes "batey."	respectful crowding to get back up to perch. Boxes well. Be vigilant in keeping leash secure
	Sometimes tricky to get in mew - move with confidence so he does not have time to go to ground;	as his bating style can easily tangle him in unsecured leash.
_	has issues with dogs and will bate repeatedly	Use judgment to determine if he should be
Duncan	No new handlers – onsite programs only Flies, so stand to the side. Slow approach works	presented to the public If he goes to ground, try leaving and coming
Edison	best. Still learning but is generally very good on the	back twice. If on ground again, employ very
Emma	glove.	respectful crowding to get back up to perch.
	Can be aggressive coming to glove. Right hand glove	
	mandatory, especially during flight season Be alert and prepared when entering mew as he does	Return to enclosure with a tidbit on his perch.
Emmitt	fly at people	Box training with box #13
Emrys		In training
		May be batey, especially with new person or if it's windy. If goes to ground, try leaving and
	Requires a relationship. Should go to quiet programs,	coming back twice. If on ground again, employ
Etta	mostly formal presentations. May need additional practice to sign-off	very respectful crowding to get back up to perch Front loads into box.
	Steps up well. May fly but let him get back to the top	
	end of the ramp/back perch and allow him to step up. Gets carsick so hold food before program and feed	
Eurus	upon return	Boxes well. He may bolt coming out of the box.
Gilly		A
	Sometimes challenging in mew. If she flies perch to	At programs and when boxing, keep right gloved hand away from her - she becomes agitated
Llodui-	perch, be careful and persistent, may fly over your	when she sees the right glove. Boxes well. May
Hedwig	head, be alert and stay toward side wall as she flies	bolt out of box.

Bird	Quirks	Special Handling/Boxing Instructions
Henry	Head is always tilted due to injury. Usually found on platform behind little wall he has for privacy. Will bill clack and puff up a bit but steps up. Does well at night time programs. May snooze on glove at longer programs. Can get back up on glove if he bates, but if he starts to spin he'll need help getting back on glove.	Boxes well, but will turn circles in box so be prepared to untangle/unwind jesses after taking him out of box. Gets vocal during breeding season. If screams loudly he'll need to be boxed.
Horus	Still in training. Might flap and fidget when you go to get him. Let him settle and he steps up well from top of walk up. Often has blood feathers so please keep an eye on that.	In box training
Hunny	Needs relationship. Formal presentations for now. Approach slowly and let her settle. Stop walking if she looks to the ground. Ask her to step on the glove.	If goes to ground, try leaving and coming back twice. If on ground again, employ very respectful crowding to get back up to perch. Boxing well, but be ready for her to "bolt" out of box.
Iris	Can be aggressive so note where she is when you walk in. She may fly at you. Be patient and ask her to "hup". She has sticky feet coming off the perch sometimes.	Boxes well. Spins in her box so she tangles equipment so check on her regularly.
Irwin		
Jacques		
Jax		
Junior	Must have relationship with him for him to work with you	Do not take out of enclosure
Jupiter	Used in flight program. Can be territorial in enclosure.	
Kelvin		
Lance	May be very vocal at programs. Steps up well and flies well.	If the handler can't handle the vocalizing, don't take him to a booth or take tiring for him to work on. Boxes nicely. Head first in 11A
Lexi	May be aggressive in the mew. Use care.	Boxes well.
Lizzie	Steps up stubbornly, but well. Used in flight program. Gets car sick	Boxes well.
Lobo	Needs a relationship in order to collect/fly easily	Training on boxing
	Approach slowly and let her settle. Steps up well. The first couple of times she might fly back and forth. When she settles on the back perch, she will step up.	
Lucien (Lucy) Maggie	Can use the "side shuffle" approach Has been known to fly at faces. Might bite at right hand when collecting in mew. Doesn't like seeing right hand or glove (right hand glove is MANDATORY).	Boxes well On approach, stay close to walls, don't stand in middle of mew. Use left gloved hand as a shield when getting her from/placing her in travel box. (She stands right in front of the door of the box) Boxes well. When out with her, keep right hand away from her.

Sirius	Shireen		
	Sirius		

Snickers	Will fly perch to perch a few times before stepping up, and may fly at you! Approach from side and don't stand in middle of mew. Be ready if she flies at you. Especially in spring she may puff up, bill clack, and bite at glove, move with confidence but carefully. Right glove mandatory	She used to un-hook herself in box by turning around repeatedly in the box and going to the back of the box, thus shortening the leash and pulling jesses through clasp. The tension on the shortened leash can pull open the box door. This has not happened for a long time, but it is best to place door end of her box against something, i.e. back of another travel box. Boxes well.
Stella	Vary good on glove. Not to go offsite due to age	Use judgment to determine if she should be presented to the public
Sundance	Very good on glove. Not to go offsite due to age. Needs a relationship. May fly back and forth a couple times, but does step up. Might bate going through doors, but recovers well	Boxes well
Tristan	Use slow approach. He steps up 2 ways. 1) either "hup" from the front or 2) put your gloved hand behind his feet and ask him to step up. If you are new he can be bate-y but he gets up quickly.	Needs box training and more exposure to handlers and situations. Uses Box 11A (door open type, not guillotine stlye)
Tucker	May fly, but often just steps up.	Boxes well
Tyrion	Watch for blood feathers. Needs help if bates	Use box #3 (larger size). Isn't boxed often so might be rusty.
Venus	Typically hanging up on top of her box. She will stay perfectly, lay jesses over your glove and she will step up.	Boxes well in #5 box. Prefers to go in forward. Needs exposure to handling and public situations including wildlife.
Veto	As of 2023, not to go off-site due to age.	Do not use around public, but please continue to take him out if you are signed off on him
Willis		
Zane	Used in flight program	In training
Zelda		
Zephyr	Flies a little at first, but once he gets back to the back perch, he steps up. He does like to vocalize and flap. If he gets super restless and bate-y, he should go back.	Needs box training, exposure to handlers and to public situations.
Snakes	Do not take to program if shedding.	Place snake in pillowcase, zip it and use clencher. Always check the seams of pillow case for tears or weak spots. Bring extra pillowcase and towels in case of defecation.
Gila Monsters	Hibernates during the winter, do not take out then.	Make certain display case has some time of fastener/lock to prevent top from being opened at program. Use gloves to handle.
Desert Tortoises	Likely to pee/void. Hibernate during winter – do not bring to program	Bring extra newspapers/paper towels. If they void during program, give them a chance to soak in water upon return to Liberty.
