

Kid Stuff

Nurturing Nature

To: All kids who help nature!

Look closely at nature to understand it and discover ways to help! Our Kid Stuff logo shows a girl looking closely at a grasshopper using a magnifying glass. Do you think she got curious about grasshoppers and found a way to help them? I do!

Binoculars help us see things by either making them bigger or closer. They are great for finding wildlife far away.

Do you know how to use binoculars? It's easy and if you do these things:

1. Always have the strap around your neck.
2. Never walk or run while looking through binoculars!
3. Move the eye pieces and lenses so you see clearly.
4. First look with your eyes, then bring the binoculars up to your face.

Magnifying glasses help us see small animals or bugs or plants up close.

Use your magnifying glass to discover little things you might not see with just your eyes.

Practice moving your magnifying glass toward your face and further away from you. What happens to the thing you are trying to see? Does it get bigger? Smaller?

Practice looking for wildlife all around you, then write or draw what you see.

You can make your own fun binoculars here.
